

Our Products

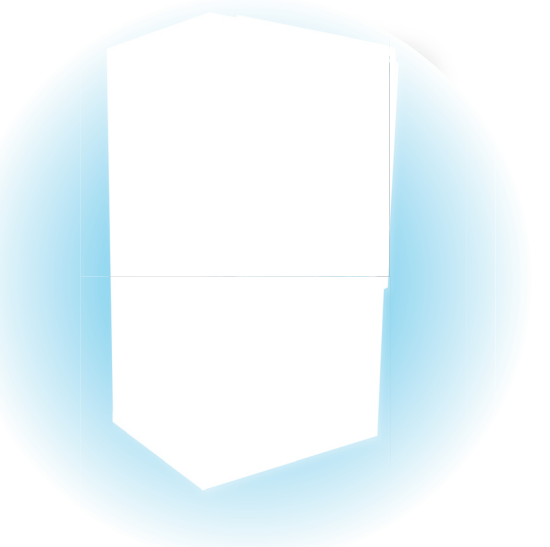

Water Source Heat Pumps

WSHPs are combination heating and cooling units that provide efficient room-by-room comfort. Units function independently while they are piped to a central water loop and come with digital controls designed to optimize user comfort and ease of operation.

- Vertical Stack
- Console (Flat and Slope Top)
- Horizontal
- Vertical Closet

Features:

- Smallest footprint in the market
- Enhanced sound attenuation is standard
- Advanced controls and building automation options
- Unique vertical stack riser design for easier installation

Packaged Terminal Air Conditioners

Ice Air PTACs are designed for ultra-high efficiency and incorporates advanced LEED features in a durable, user-friendly package. New construction units feature EERs to 12.0, as well as whisper quiet sound levels, commercial grade construction and balanced air flow.

- HiSpec™ units for new construction
- Full line of ExactFit™ replacement units

Advanced Optional Features:

- ThermalGuard — eliminates heat transfer through wall sleeve casing
- Xstream Air — add-on Outside Air Module for full-time ventilation
- SoundShield — OITC/STC sound attenuation package

Fan Coil Units

A simple and easy cooling and heating solution that provides reliable performance, high efficiency, ease of operation, low cost, easy installation, quiet comfort and a variety of solution-based options.

- Vertical Exposed
- Horizontal Concealed (and Ultra Thin)
- Vertical Concealed
- Hi Rise Stack

Features:

- Customizable configuration options
- Project-specific factory-installed piping packages

Innovative Solutions

Hybrid Water-Cooled A/C

The Hybrid WCAC is an innovative system that combines high-efficiency cooling with a hot water coil that provides hydronic heat without using the unit's compressor. When coupled with a highly efficient condensing boiler, these units provide the most cost-effective and efficient method of space heating for multi-family buildings.

Features:

- Low Entering Water Temperature (EWT) allow for use with a condensing boiler
- High efficiency and less environmental impact
- Limited compressor use allows for quiet operation and extends compressor life
- Available in Console, Horizontal, Vertical Closet and Vertical Stack configurations

Single Package Vertical A/C & Heat Pump

A unique air-to-air system that provides ultra-quiet operation and high energy efficiency cooling and heating. The SPAC/SPHP is designed to cool and heat multiple spaces within multi-family, lodging, dormitory or light commercial buildings.

Features:

- Available with Standard and High Velocity condenser configurations
- Designed for easy installation and maintenance
- Flexible state-of-the-art digital controls
- Provide heating and cooling for single or multiple spaces
- High Velocity configuration can be located in an interior space with ducted compressor to meet static pressure of up to .75"
